Liver
Heart
Kidney
Fatty acid biosynthesis
Glycolysis / Gluconeogenesis
Starch and sucrose metabolism
Fructose and mannose metabolism
Fatty acid metabolism
Tryptophan metabolism
Mucin type O−glycan biosynthesis
2−Oxocarboxylic acid metabolism
Terpenoid backbone biosynthesis
D−Amino acid metabolism
Inositol phosphate metabolism
Phosphonate and phosphinate metabolism
Lysine degradation
Histidine metabolism
Riboflavin metabolism
Pantothenate and CoA biosynthesis
Adaptive immune memory response
Helper T cell extravasation
Negative regulation of NK T cell activation
Mast cell apoptotic process
Regulation of neutrophil degranulation
Mast cell proliferation
Cytotoxic T cell differentiation
Regulation of neutrophil extravasation
Regulation of chronic inflammatory response
NK T cell differentiation
Extrathymic T cell differentiation
Positive regulation of T cell migration
