Alistipes sp.
Metabolic pathways
Biosynthesis of secondary metabolites
Microbial metabolism in diverse environments
Carbon metabolism
Two-component system
Amino sugar and nucleotide sugar metabolism
Biosynthesis of nucleotide sugars
Purine metabolism
beta-Lactam resistance
Pyrimidine metabolism
Nucleotide metabolism
Glycolysis /Gluconeogenesis
Aminoacyl-tRNA biosynthesis
Quorum sensing
Other glycan degradation
Starch and sucrose metabolism
Homologous recombination
Sphingolipid metabolism
Alanine, aspartate and glutamate metabolism
ABC transporters
Sham

Muribaculum sp.
Metabolic pathways
Biosynthesis of secondary metabolites
Microbial metabolism in diverse environments
Two-component system
Biosynthesis of amino acids
Aminoacyl-tRNA biosynthesis
Amino sugar and nucleotide sugar metabolism
Biosynthesis of nucleotide sugars
Galactose metabolismPurine metabolism
Pyrimidine metabolism
Cysteine and methionine metabolism
Pyruvate metabolism
Nucleotide metabolism
Glyoxylate and dicarboxylate metabolism
Other carbon fixation pathways
Quorum sensing
Biosynthesis of various nucleotide sugars
Ribosome
RNA degradation
