
1:Pro-B cell differentiation 2:Cytotoxic T cell pyroptotic process 3:Mast cell differentiation
4:Neutrophil mediated cytotoxicity 5:lymphocyte proliferation 6:T cell receptor V(D)J recombination
7:Basophil activation 8:Immunoglobulin V(D)J recombination 9:Leukocyte chemotaxis
10:Leukocyte migration 11:Chronic inflammatory response to non-antigenic stimulus
12:Riboflavin metabolism 13:Cobalamin transport and metabolism 14:Valine, leucine and isoleucine biosynthesis
15:Pantothenate and CoA biosynthesis 16:Glycerophospholipid metabolism 17:Fructose and mannose metabolism
18:Phosphonate and phosphinate metabolism 19:Starch and sucrose metabolism 20:Fatty acid metabolism
21:Arginine biosynthesis
