
1:Mast cell proliferation 2:B cell chemotaxis 3:T cell mediated cytotoxicity 4:Acute inflammatory response to non-antigenic stimulus
5:Stimulatory killer cell immunoglobulin-like receptor 6:T-helper 17 type immune response 7:Type 2 immune response
8:Humoral immune response 9:Positive regulation of mast cell cytokine production 10:Neutrophil degranulation
11:NLRP3 inflammasome complex assembly 12:Helper T cell diapedesis 13:Acute inflammatory response to non-antigenic stimulus

14:Fatty acid biosynthesis 15:Phenylalanine, tyrosine and tryptophan biosynthesis 16:Pantothenate and CoA biosynthesis
17:Vitamin B6 metabolism 18:Caffeine metabolism 19:Riboflavin metabolism 20:Various types of N-glycan biosynthesis
21:Folate biosynthesis 22:Fructose and mannose metabolism
